DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/12/02 has been entered.

Response to Amendment

2. The Amendment filed 9/12/02, entered with the Request for Continued Examination filed 2/12/03, successfully overcomes the rejection set forth in paragraph 3 of the Office Action dated 3/18/02. Accordingly, this rejection is withdrawn.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,714,195 to Shiba et al. (Shiba). Shiba discloses a method of repairing defects in a color filter comprising the steps of removing a portion of a filter element having a

Application/Control Number: 09/602,477 Page 3

Art Unit: 1756

foreign substance therein by utilizing a laser beam, and discharging a hardening resin containing a dye or pigment from an ink-jet head onto the portion from which the foreign substance has been removed. See the abstract, column 11, line 61 to column 12, line 9, and Figures 10A-10D. Additionally, Shiba utilizes the ink-jet apparatus for manufacturing the color filter without any modification as the apparatus for repairing defects. See column 12, lines 27-31. This ink-jet head does not comprise a laser (see column 10, lines 32-56 and Figure 5), therefore the relative position of the laser irradiation unit and the ink jet unit is variable.

Allowable Subject Matter

4. Claims 2-4 are allowed.

Response to Arguments

5. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues that in the present invention the relative position of the laser irradiation unit and the ink jet unit are variable, while according to the teachings of Saruta (i.e. the secondary reference in the withdrawn 35 USC 103 rejection over Shiba in view of Saruta), defect processing is performed with a needle which is not independently and separately operated with respect to the x-y plane from the laser unit. However, Applicant has amended claim 1 so that a corrective ink is supplied by an ink jet unit (as in Shiba), not by a needle (as in Saruta). Accordingly, the disclosure of

Application/Control Number: 09/602,477

Art Unit: 1756

Saruta is no longer needed to supply the needle method which is missing form Shiba.

Shiba by itself teaches repairing defects by ink jet printing, and Shiba does not utilize a

combined laser and ink supplying means (as does Saruta).

6. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to John A. McPherson whose telephone number is (703)

308-2302. The examiner can normally be reached on Monday through Friday, 7:30 AM

to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Mark Huff can be reached on (703) 308-2464. The fax phone numbers for

the organization where this application or proceeding is assigned are (703) 872-9310 for

regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is (703) 308-

0661.
